Hyperbaric ozone therapy: scientific considerations [abstract]

Robert Jay Rowen

Private Medical Practice. Santa Rosa, California, United States of America

ABSTRACT

Background. This ozone world is little familiar with a modification of major autohemotherapy called hyperbaric ozone therapy (HBO₃). This method may be a superior delivery system of ozone therapy, capturing benefits of intravenous oxygen gas as well as the oxidizing power of ozone therapy.

Material and Methods. I will discuss a scientific comparison between the largely reviled direct intravenous ozone administration and HBO₃, inclusive of a safety/efficacy survey of practicing HBO₃ physicians in America.
